SUMMARY

Android Engineer with **2+ years of experience** developing Android applications using Kotlin, Jetpack Compose, MVVM, and Clean Architecture.Experienced in REST APIs, WebSockets, Firebase, Coroutines, WorkManager, offline-first architecture, and performance optimization, with hands-on experience maintaining production Client, Delivery, and Store applications.Developed and maintained mobile solutions across e-commerce, transportation, booking, and food delivery platforms, focusing on application stability, scalability, and user experience.

★ KEY ACHIEVEMENTS

- Contributed to the successful production release and maintenance of multi-module Android applications serving real business operations.
- Led teams during ITI graduation and Java projects, demonstrating leadership and task coordination skills.
- Worked on delivery, transportation, restaurant, booking, and e-commerce domains.
- Built scalable and maintainable Android applications following MVVM and Clean Architecture principles.
- Improved application performance, startup stability, and background synchronization across multiple production modules.

EXPERIENCE

01/2026 – Present
Cairo , Egypt

Android Engineer
Sapqoon

- Contributed to scalable food delivery applications across Client, Delivery, and Store platforms.
- Developed and maintained production-ready features including cart, checkout, notifications, and real-time order tracking.
- Improved app startup time, stability, and overall user experience across multiple modules.
- Enhanced real-time synchronization and notification reliability using WebSockets, WorkManager, and background services.
- Collaborated with backend, QA, and product teams to deliver maintainable and scalable mobile solutions.
- Participated in production support, crash fixing, debugging, and performance optimization.

Technologies : Kotlin, Jetpack Compose, MVVM, Clean Architecture, Coroutines, Flow, Retrofit, Room, Firebase, FCM, WorkManager, WebSockets, Git

07/2024 – 09/2025
Riyadh , Saudi Arabia

Android Engineer
Smart Lee (*Remotely*)

- Developed and maintained Android features for multi-service applications including Taxi, Restaurants, Hotels, Flights, and Parcel Delivery modules.
- Built scalable mobile solutions using MVVM and Clean Architecture with focus on performance, maintainability, and clean code practices.
- Integrated REST APIs, optimized data handling, and improved application responsiveness and stability.
- Participated in debugging, production support, code reviews, and feature enhancement cycles within agile development environments.

Technologies: Kotlin, Java, MVVM, Clean Architecture, Retrofit, Firebase, Room, Git

EDUCATION

10/2023 – 06/2024 **ITI - 9-Month Professional Diploma**
Information Technology Institute (*ITI*), *Ministry Of Communications and Information Technology* (*MCIT*).
Native Mobile Applications Development

09/2019 – 05/2023 **Bachelor of Computer Science**
Faculty of Computers and Information, Menofia University
- Graduation Project: Advising Network App (Grade: Distinct)
- Overall Grade: Good

TECHNICAL SKILLS

Android Development
Kotlin, Java, Android SDK, Jetpack Compose, MVVM, MVP, Coroutines, RxJava, WorkManager, Services, Background Services, Broadcast Receivers, Deep Links, Dependency Injection, Hilt

Data & APIs
Retrofit, OkHttp, Room, SQLite, Firebase, FCM, Crashlytics, REST APIs, WebSockets, Paging 3

Tools
Android Studio, Git/GitHub, Gradle, Figma, Unit Testing

Concepts
OOP, Agile/Scrum, Performance Optimization, Background Processing, Startup Time Optimization, Real-Time Tracking

COURSES

Android & Kotlin - The Android-Kotlin Development Guide
Udemy
The Android-Kotlin Development Guide covering essential concepts and practices for developing Android applications

Android App Development Specialization
Coursera
Specialization program focusing on Android app development, encompassing various key topics and advanced techniques

Data structures & Algorithms, Princeton University
Coursera
Course focused on data structures and algorithms, taught by Princeton University

PROJECTS

Hatli — Hyperlocal Errand & Delivery Marketplace
Personal Portfolio Project | Kotlin, Jetpack Compose, Firebase
- Developed an Android marketplace connecting requesters and runners through an end-to-end errand and delivery workflow, including request creation, runner acceptance, status updates, and related user interactions.
- Implemented a modular architecture using MVVM, Hilt, Kotlin Coroutines, and reactive state management to support maintainability and scalable development.
- Integrated Firebase Authentication, Cloud Firestore, and Room for user authentication, request management, real-time data synchronization, and local user-profile caching; implemented an explicit database migration to safely remove obsolete sample data.
- Implemented Arabic/English localization and RTL layout support, focusing on usability, maintainability, and a consistent user experience.

Tech Stack: Kotlin, Jetpack Compose, MVVM, Hilt, Coroutines, Flow, Firebase Auth, Cloud Firestore, Room.

Fashion Shop App
(*ITI Graduation project*)
Fashion Shop App focused on delivering a seamless e-commerce experience.
- Developed an e-commerce app with category browsing, secure login, payment options, and customizable cart.
- Utilized technologies such as Kotlin, Firebase, Navigation Component, Retrofit, and MVVM.

LANGUAGES

Arabic
(Native).

English
(Excellent).
